### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance: The applicant's argument regarding a desirability in the Dekura reference (5,538,246) to minimize thickness teaching away from depositing nickel layers thereon is convincing. Specifically, Dekura discloses at column 2 lines 1-6 and 32-41 that the advantage of increased moment of inertia and softer feel are achieved by using low specific gravity metal and low thickness in the head. One reading these teachings would not be motivated to deposit Ni on the magnesium head because Ni has a high specific gravity on the order of stainless steel and the coating would increase the thickness of the head. Hence, providing the coating would be expected to negate advantages taught by Dekura for using Mg for the golf club head.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
